Phone: 0773939468

## Summary

Personally, I am a gentle, humorous, honest person who works hard and acquires new knowledge to be able to complete the highest quality work, and is able to adapt to many different working environment.

## Education

Bachelor of Information Technology at RMIT University  
Vietnam

GPA: 3.3 / 4.0

## Project Experiences

### RBlog

This is a MERN project that my teammates and I have developed to help users create, edit, and share their own blogs about technology and it was developed by using MongoDB, Express.js, React.js, and Node.js.

In this project, my role is as a frontend developer, using React.js and Tailwind CSS to build the UI of the "Forgot password" page, "Create blog" page, "Profile" page, "Dashboard" page, and all CRUD functions for blogs connecting with backend.

### Radiological Collaboration Tool

The project was developed to support doctors to contact each other through video calls and it was built by using MERN including MongoDB, Express.js, React.js, and Node.js.

In this project, my role is as a frontend developer, using React.js and Tailwind CSS to build all UIs, connecting the frontend and backend through handling the API created by the backend developer in the team, and developing the functions in "Meeting room" such as audio, recording, drawing canvas, etc.

### RMITinder

This is the first MERN project that my teammates and I have developed which was built based on the Tinder app and it was developed by using MongoDB, Express.js, React.js, and Node.js.

In this project, my role is as a frontend developer, using React.js and Tailwind CSS to build the UI of the "Forgot password" page, "Reset password" page, "Chat" page, connecting the frontend and backend through handling the API created by the backend developer in the team, and make the real-time chat using socket.io.

### VF Corporation

This is my first project that I have done since I started to learn about developing websites. The project is a game-selling website and it was built by using HTML, CSS, and JavaScript

In this project, I have developed 4 main pages including "Home" (to introduce the web), "Product" (display all products in the store), "About" (introduce myself), and "Cart" (contains products added to cart) along with the functions of buying, selling, paying, and adding to cart.

## Skills

HTML/CSS/JavaScript

★★★★★

React.js

★★★★★

Tailwind CSS

★★★★★

Swift UI

★★★★★
